Understanding The Usage Of Technolgy

Technology is something by which we can minimize our work and make work simple and reliable. Technology refers to anything created by humans to make tasks easier, faster, or more efficient. Technology has become an integral part of modern life, changing the way we live, work, and communicate. Technology is one of the fastest-growing industries all over the world. Due to the increase in technology, usage and dependency on technology are also increasing day by day. People are mostly dependent on and stick to technology. Technology such as mobile, tv, laptop, computer, and all other social media platforms and many more. So, here's the problem stated by **5W's**.

WHO is affected?

1. **Student**: Students are mostly affected by technology.

2. **Gen-Z**: Gen-Z or youth is also affected by social media.

3. **Senior Citizen**: Not only youngsters are dependent, but also senior citizens are too involved in it.

4. **Middle-Aged People**: People belonging to the age group 40 to 60 are also involved in this.

5**. Country**: Mostly, all people in India and outside of India depend on technology and social media

6**. Company**: Companies are readily engaged in technology and social media platforms.

7. **Employer and Employee**: Employers and employees are also affected by technology and social media.

WHAT is happening?

Everywhere, the scope of social media and technology is increasing, and people are increasingly engaged with the internet and technology platforms such as **WhatsApp** and **Facebook**, whose user base is growing rapidly.

WHEN is it happening?

It has been happening since the early 2000s and has continued till today. In addition, its growth has accelerated even more since the onset of the pandemic.

WHERE is it happening?

It is happening all over the world, mainly in homes, schools, colleges, universities, MNCs, and government institutions - probably in every aspect of life.

WHY is it happening?

The increasing use of technology is due to advancements in technology, and people have become increasingly dependent on it.

Objectives?

In the past, the three basic aspects of life were food, shelter, and clothing, but today, technology has become a crucial fourth aspect. Technology is becoming increasingly versatile in today's world, and people are becoming more technologically dependent. From small children to 80-year-old adults, everyone is reliant on technology and social media. However, the increase in social media and technology is also contributing to the worsening of the environment. People are not using their mental abilities and are instead becoming overly dependent on technology. Even small children who cannot yet write are using mobile phones. The excessive use of technology is leading to the deterioration of relationships and family ties. Furthermore, the high use of technology is also contributing to mental health-related problems.
